Colorado No2: The Plan

What is built, what comes next, and where it lives.

The big idea

No2 is a website that installs on a phone like an app. Android and iPhone use the very same site. It does not use the Google Play Store or the Apple App Store at all, so no app store can block it.

Stage 1: built now

- **Trading Post** home screen with 11 categories: Handguns, Long Guns, Shotguns, Hunting Guns, Slingshots, Bear Mace, Personal Self-Defense, Bows and Arrows, Accessories, Knives, Collectors. 22 sample listings.
- **Privacy:** only rough distance ("about 12 miles away"), never an address. Slider: 10 miles, 50 miles, Whole state. Colorado only.
- **Deal steps on every listing:** Offer, Counter, Lock It In (both tap, price/item/time freeze), Meet and Inspect, Deal Done (both confirm), then 1 to 5 star ratings. Five negotiation tips. No money moves through No2.
- **Colorado gun-law reminders** on gun listings: background check at a licensed dealer, age 21, 3-day wait.
- **Profiles** labeled Photo ID, Picture, Phone, or Not Verified. 3 or more ratings of 2 stars or less shows **Use Caution**.
- **No2's Library:** ask a question, get an answer. Every answer says "This is information, not legal advice." The Constitutional view note shows where the Constitution and current law differ. Our answers say "No2's Library"; web answers say "Web answer" and link to the official site.
- **Bottom buttons:** Trading Post, Library, Messages (safety tips), Newsletter (preview), Suggestion Box ("The Best Thing Worth Saying" contest preview).
- **Settings** with "Install No2" for Android and a 3-picture guide for iPhone.
- **App parts:** app name and icons in every size, navy color, full screen, works offline, friendly offline page.
- **Look:** navy, red and white; "No2" stenciled on a wooden crate; 13-star circle with "Second Amendment"; faded eagle, Liberty Bell, quill and flag art that changes on each page.

Stage 2 and later: planned, not built yet

- Real member accounts and sign-in (with "Continue with Google").
- Real ID, picture and phone checks for the verification labels.
- Private messages that are locked (encrypted) so only the two members can read them.
- Newsletter with five sections: Foundation, Law Watch, Trading Post, Gear and Skills, Art Corner.
- The Best Thing Worth Saying voting contest: one vote per verified account.
- Sponsor banners shown only inside each member's distance, with weekly bidding for spots.
- Event calendar, and a finder for ranges and classes.
- Phone alerts (push notifications) for new Colorado gun-law news.
- A small, free-to-start database service (for example Supabase or Firebase) to hold accounts, listings and messages.

Where No2 lives (hosting)

GitHub Pages: free, simple, and already tied to your GitHub account. Your web address will be:

https://launch26000-xi.github.io/calculator-app/

GitHub Pages is only free for **public** projects. That is fine: No2 is a public website and there are no passwords in it.

Your 3 setup steps (about 5 minutes, on your Chromebook)

1. ☐ Go to **github.com/launch26000-xi/calculator-app**. If asked, sign in with **Continue with Google**. Tap **Settings** (gear tab in the top row). Scroll to the very bottom, to **Danger Zone**. Tap **Change visibility**, then **Change to public**, and confirm.
2. ☐ Still in Settings, tap **Pages** in the left menu. Under "Branch," pick **claude/nice-euler-z63yg0**, leave the folder as **/ (root)**, and tap **Save**.
3. ☐ Wait 2 minutes, then refresh. At the top it says **"Your site is live at..."**. Open that address on your phone.
